American Heart Association CPR Cheat Sheet

In 2010, the American Heart Association (AHA) released their 2010 Guidelines Highlights, which outlines the key changes regarding CPR procedures. The most prominent change was the rearranging of the order from A-B-C to C-A-B in the CPR sequence, emphasizing the chest compressions. The AHA's research concluded that the old approach creates an unnecessary delay in chest compressions.

The AHA develops science-based CPR guidelines and is the leader in first aid, CPR, and AED training. All recommendations below are based on the AHA Guidelines Update for CPR and Emergency Cardiovascular Care (ECC). View the AHA Guidelines Update for CPR and ECC. CPR – or Cardiopulmonary Resuscitation – is an emergency lifesaving procedure performed when the heart stops beating.

What is CPR | American Heart Association CPR & First Aid

Steps of Child CPR. 1. Make sure the scene is safe to approach. 2. Tap the child and shout “Are you okay?” 3. Check to see if the child is breathing by looking at their chest. If they are not breathing, or not breathing normally (only gasping), call 911. If you are alone, perform CPR for 2 minutes, then call. 4.

BLS Study Guide for American Heart Association Classes

• Allow full chest recoil after each compression to allow the heart to refill with blood after each compression. • Minimize interruptions in compressions and limit interruptions to less than 10 seconds. Provide breaths so the chest rises but avoid excessive ventilation. Age Groups for CPR Infant age range is birth to 1 year year.

Cardiac arrest can strike a seemingly healthy individual of any age, race, ethnicity, or gender at any time in any location, often without warning. Cardiac arrest is the third leading cause of death in the United States, following cancer and heart disease. Four out of five cardiac arrests occur in the home, and more than 90 percent of individuals with cardiac arrest die before reaching the hospital. First and foremost, cardiac arrest treatment is a community issue - local resources and personnel must provide appropriate, high-quality care to save the life of a community member. Time between onset of arrest and provision of care is fundamental, and shortening this time is one of the best ways to reduce the risk of death and disability from cardiac arrest. Specific actions can be implemented now to decrease this time, and recent advances in science could lead to new discoveries in the causes of, and treatments for, cardiac arrest. However, specific barriers must first be addressed. Strategies to Improve Cardiac Arrest Survival examines the complete system of response to cardiac arrest in the United States and identifies opportunities within existing and new treatments, strategies, and research that promise to improve the survival and recovery of patients. The recommendations of Strategies to Improve Cardiac Arrest Survival provide high-priority actions to advance the field as a whole. This report will help citizens, government agencies, and private industry to improve health outcomes from sudden cardiac arrest across the United States.
