It used to take years or even decades for disruptive innovations to dethrone dominant products and services. But now any business can be devastated virtually overnight by something better and cheaper. How can executives protect themselves and harness the power of Big Bang Disruption? Just a few years ago, drivers happily spent more than \$200 for a GPS unit. But as smartphones exploded in popularity, free navigation apps exceeded the performance of stand-alone devices. Eighteen months after the debut of the navigation apps, leading GPS manufacturers had lost 85 percent of their market value. Consumer electronics and computer makers have long struggled in a world of exponential technology improvements and short product life spans. But until recently, hotels, taxi services, doctors, and energy companies had little to fear from the information revolution. Those days are gone forever. Software-based products are replacing physical goods. And every service provider must compete with cloud-based tools that offer customers a better way to interact. Today, start-ups with minimal experience and no capital can unravel your strategy before you even begin to grasp what's happening. Never mind the "innovator's dilemma"—this is the innovator's disaster. And it's happening in nearly every industry. Worse, Big Bang Disruptors may not even see you as competition. They don't share your approach to customer service, and they're not sizing up your product line to offer better prices. You may simply be collateral damage in their efforts to win completely different markets. The good news is that any business can master the strategy of the start-ups. Larry Downes and Paul Nunes analyze the origins, economics, and anatomy of Big Bang Disruption. They identify four key stages of the new innovation life cycle, helping you spot potential disruptors in time. And they offer twelve rules for defending your markets, launching disruptors of your own, and getting out while there's still time. Based on extensive research by the Accenture Institute for High Performance and in-depth interviews with entrepreneurs, investors, and executives from more than thirty industries, Big Bang Disruption will arm you with strategies and insights to thrive in this brave new world.

Today we all face more impossible challenges than ever before. But flash foresight lets you transform the impossible into the possible, revealing hidden opportunities and allowing you to solve your biggest problems—before they happen. Daniel Burrus is one of the world's leading forecasters, corporate strategists, and visionaries. Over the past quarter century, he has established a reputation worldwide for his exceptional record of accurately predicting the future of technological change and its direct impact on the business world. "Wouldn't it be amazing if you could predict the future—and be right?" writes Burrus. "You can: all you have to do is leave out the parts you could be wrong about! And the amazing thing is, when you know where to look, there's more than enough you can be right about to make all the difference." From small businesses to multinationals, individual careers to entire industries, Flash Foresight looks at how Burrus's seven radical flash foresight "triggers" have transformed dozens of careers, fortunes, and lives. Both engaging and enlightening, Flash Foresight provides an easy-to-implement blueprint for applying the same strategies to your own business, enabling you to see the invisible and do the impossible. In the past, flash foresight was useful. Today, as the pace of technological change accelerates almost beyond the point of comprehension, it's an imperative.

Burrus, world-renowned for his extraordinary accuracy in predicting the technological future, presents fully predictable "hard trends" and makes them accessible by using a familiar metaphor—a card game. "Entertaining and demystifying".--Stephen R. Covey (The 7 Habits of Highly Effective People). Line art.

COVID-19 wrecked the plans and strategies of organizations everywhere, while injecting greater uncertainty into a world already undergoing disruptive social and technological change. Strategic Foresight can help us navigate through the recovery and beyond. Strategic Foresight is a systematic, intelligence-gathering, vision-building process that helps us manage uncertainty by discerning plausible alternative futures and applying the insights to present-day planning. It is ideally suited to a world upended by the pandemic and rapid transformations in the way we live, work and interact. Using approachable language and a multitude of examples, Learning from Tomorrow shows how Strategic Foresight broadens our perspectives, exposes opportunities and risks, and opens our minds to innovation in a post-pandemic world. It is essential reading for organizational leaders and those responsible for developing strategies, scenarios, policies and plans.

The process of user-centered innovation: how it can benefit both users and manufacturers and how its emergence will bring changes in business models and in public policy. Innovation is rapidly becoming democratized. Users, aided by improvements in computer and communications technology, increasingly can develop their own new products and services. These innovating users—both individuals and firms—often freely share their innovations with others, creating user-innovation communities and a rich intellectual commons. In Democratizing Innovation, Eric von Hippel looks closely at this emerging system of user-centered innovation. He explains why and when users find it profitable to develop new products and services for themselves, and why it often pays users to reveal their innovations freely for the use of all.The trend toward democratized innovation can be seen in software and information products—most notably in the free and open-source software movement—but also in physical products. Von Hippel's many examples of user innovation in action range from surgical equipment to surfboards to software security features. He shows that product and service development is concentrated among "lead users," who are ahead on marketplace trends and whose innovations are often commercially attractive. Von Hippel argues that manufacturers should redesign their innovation processes and that they should systematically seek out innovations developed by users. He points to businesses—the custom semiconductor industry is one example—that have learned to assist user-innovators by providing them with toolkits for developing new products. User innovation has a positive impact on social welfare, and von Hippel proposes that government policies, including R&D subsidies and tax credits, should be realigned to eliminate biases against it. The goal of a democratized user-centered innovation system, says von Hippel, is well worth striving for. An electronic version of this book is available under a Creative Commons license.

For fans of Rachel Hollis and Rachel Rodgers, here's a fast read that is sure to inspire the unapologetic, shame-free embrace of not playing small in life. Ladies, leadership, and legacy! Like gravity, sowing and reaping is a natural law of life—you simply reap what you sow. It naturally plays and pays out, until it DOESN'T. Time and again, history has shown that until society learns and positively changes from the past with its deeply-rooted thought patterns and norms, we are condemned to repeat its many trappings, stereotypes, and shortcomings. Never Get Their Coffee is a call to action and underscores the glass ceiling disparities of gender equity in the marketplace. However, its focus fixates on helping shape societal strides in fueling fearless leadership, and its mission is in inspiring faith and tenacity of the human spirit to dream a dream, sow a thought, reap an action...a habit...a character...and ultimately to discover one's destiny. Woods' challenge for all her readers is that death is not a respector of persons—stop apologizing for success, aim high, dream deeply, and start living your divine calling. Become doers of destiny.

We are in a time of accelerating disruptive change. In a VUCA world - one characterized by volatility, uncertainty, complexity, and ambiguity - traditional leadership skills won't be enough, noted futurist Bob Johansen argues. Drawing on the latest forecasts from the Institute for the Future - the first futures think tank ever to outlive its forecasts - this powerful book explores the external forces that are shaking the foundations of leadership and unveils ten critical new leadership skills. How adroit are you at dilemma flipping - turning problems that can't be solved into opportunities? Can you develop bio - empathy - the ability to learn from and apply the principles of nature in your leadership? Are you able to practice immersive learning - dive into very different - from - you physical and online worlds and learn from them? Johansen provides role models, tools, and advice to help you develop these and seven other future leadership skills. In addition, Johansen deals with two new forces that are shaping the future. The first is the "digital natives" - people fifteen years and younger who have grown up in a digital world. The second is cloud - based supercomputing, which will enable extraordinarily rich new forms of connection, collaboration, and commerce. In this thoroughly updated and expanded second edition, Johansen is joined by the prestigious Center for Creative Leadership. CCL's contributions help readers understand the new leadership skills by linking them to existing skills, and they provide analytics and exercises so readers can more fully develop these new skills.
